

**FOLLOW-UP QUESTIONNAIRE FOR POSITIVE PPD SKIN TESTS**

**EMPLOYEE NAME:** \_\_\_\_\_

Title 22 of the California Administrative Code of Regulations related to operation of health facilities requires testing of employees for tuberculosis. Persons with a known significant reaction to tuberculosis skin testing procedures do not need to have an annual chest x-ray, but must report promptly, to Elitecare Medical Staffing, any symptoms suggesting tuberculosis.

Chest x-rays are not required as an annual follow-up for positive skin tests. We require the questionnaire below to be completed, signed and returned to us at (559) 446-2170.

Are you currently experiencing any of the following symptoms? Please mark the appropriate box.

<b>Symptom</b>	<b>Yes</b>	<b>No</b>
Night Sweats (longer than one week)		
Persistent Cough (lasting longer than 3 weeks)		
Persistent fatigue with a low grade fever (over 100 F for more than one week)		
Weight loss or anorexia (more than 10 lbs.)		
Flu like illness that persists		
Recurring dull, aching pain or tightness in the chest		

If at any time you have symptoms suggestive of tuberculosis, i.e. those listed above, please report this to Elitecare Medical Staffing at (559) 438-7700.

Minimally, an updated PPD questionnaire is required every 12 months.
